

What should I do when the carbon monoxide detection device sounds?

Silence the device. Call your emergency services, fire department, or 911 and tell them your carbon monoxide detection device has triggered. Move everyone immediately to fresh air-outdoors or by an open door or window. Do a head count to check that all persons are accounted for. Do not re-enter the premises or move away from the open door or window until the emergency services responder has arrived, the premises have been aired out, and your carbon monoxide detection device remains in its normal condition.
